

THE PERFECT PACKAGING

PEOPLE MAKE BUSINESS

In our business it is the packaging that counts. We, at FUJI PACKAGING, are your specialists for this. For over 40 years, we have been supplying horizontal form, fill and seal machines, the FUJI α wrapper from the world market leader FUJI Machinery in Japan to our customers in the food, pharmaceutical and non-food industries. Our main goal: to offer product- and customer-specific packaging solutions.

Recyclable packaging plays a key role for us, as our customers have to meet the increasing convenience demands of consumers as well as requests for more sustainability. Packaging design, machine functionality and energy efficiency are in harmony even at high performance. Based on this, FUJI is continuously (r)evolutionizing packaging technology and setting new standards, including format flexibility, sealing technology and „life cycle costs“. For us, sustainability is not just about reducing packaging material. Additionally, long service life of FUJI machines and low energy consumption complete the picture.

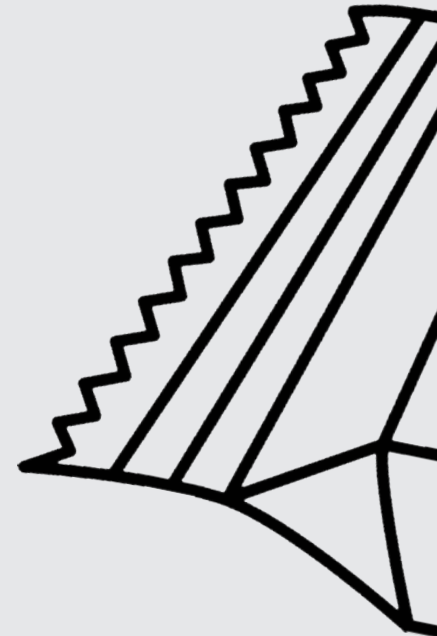

True to our motto „People make Business“, technology alone would be nothing without the personalities behind it. For many years, our approximately 50 employees in Germany and Denmark have had a strongly networked know-how and a trusting cooperation - also in dealing with our valued suppliers and cooperation partners. This is also felt by our customers.

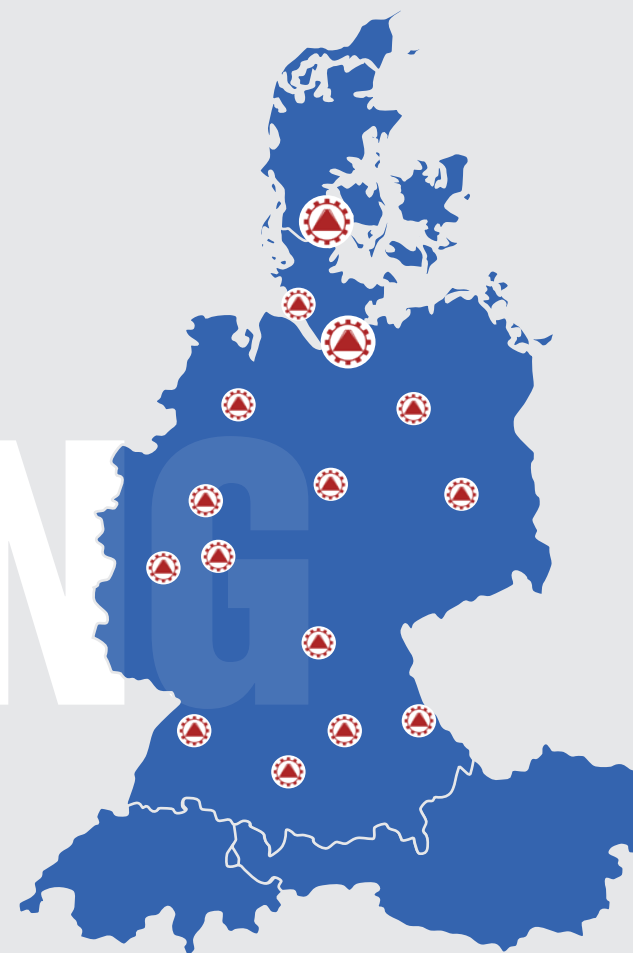

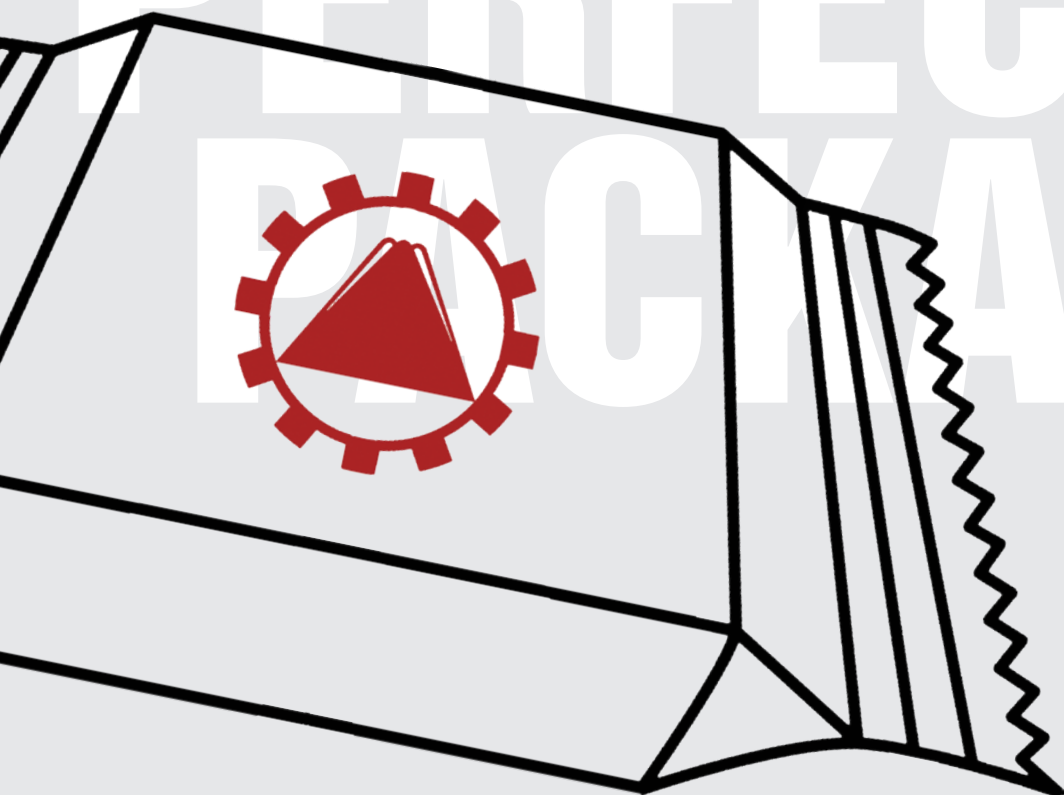

Yours sincerely,

Lars Kistenmacher and the FUJI PACKAGING team

Lars Kistenmacher
CEO

As a flowpack specialist, FUJI PACKAGING employees develop customized packaging solutions on site, starting from the serial product, the FUJI α wrapper from Japan.

OVER 75 YEARS OF KNOW-HOW

In **1946** FUJI Machinery was founded, in 1978 the first FUJI wrapper was shipped to Denmark and since 2000 FUJI PACKAGING is 100% subsidiary of FUJI Machinery, a family-owned company from Nagoya, Japan with more than 700 employees worldwide.

FUJI Machinery produces horizontal form, fill and seal machines in Nagoya, which are shipped all over the world as well as to Hamburg. Our machines are then further transported to Sønderborg to be completed and then delivered to our customers in the DACH region and Denmark.

FUJI FW3400 *alpha wrapper 8*

ADDED VALUE WITH A FLAIR FOR TRENDS

-  Tailor-made complete solutions
-  Adaptation of plant engineering to individual automation and design requirements
-  Sustainable, recyclable packaging
-  Format flexibility
-  Low life cycle costs
-  Support right down the line: from design and project planning to service

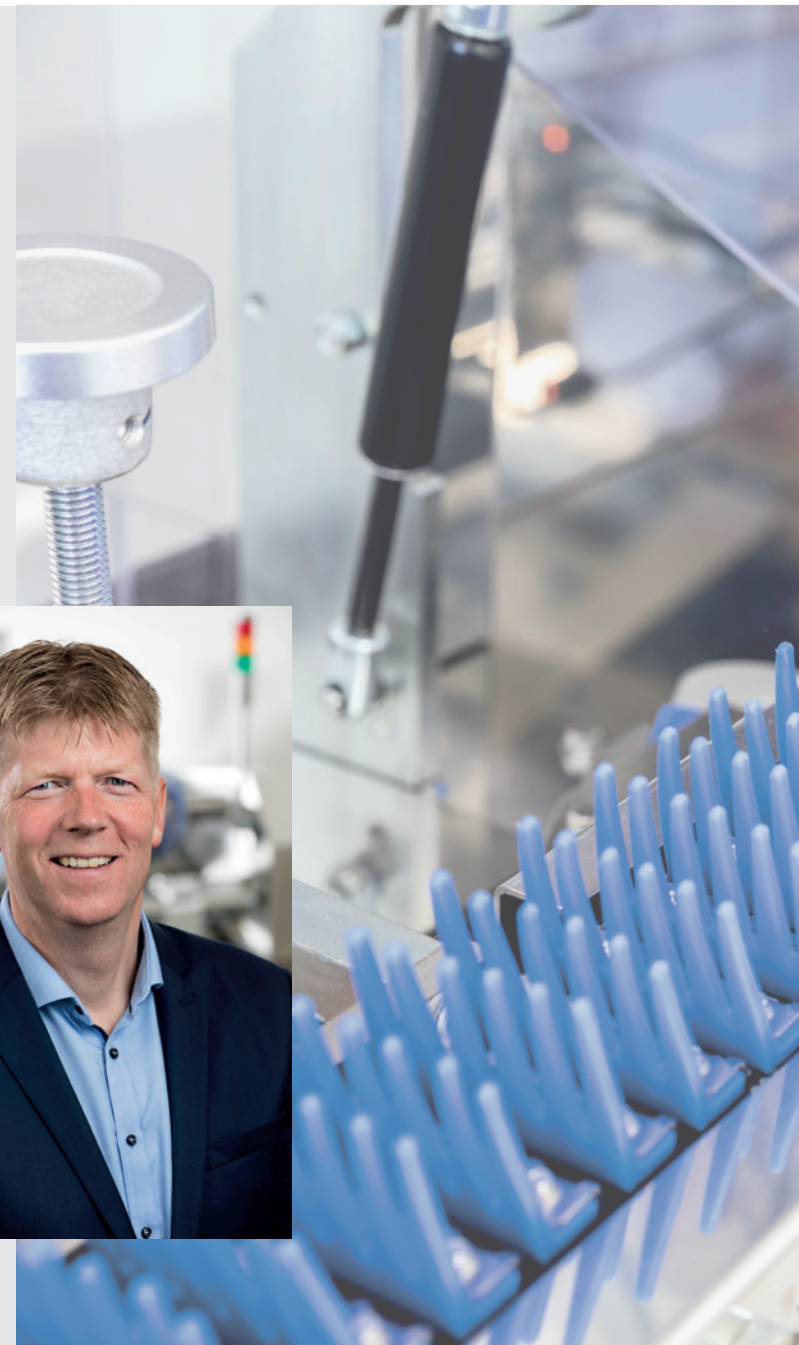

„The modular design of the
FUJI machine architecture gives
the freedom to realize packaging
tasks of the future.“

PACKED IN A FLOW PACK

Horizontal tubular bags are among the most common types of packaging. The individual and modular design of the format-flexible FUJI form, fill and seal machines offers solutions for almost every application – be it for 1500 candies per minute or 15 kg cheese blocks, high-speed or special packaging, handle protection or hermetically sealed modified atmosphere packaging, single or multi-pack, food or non-food. On the following pages we present a selection of our typical applications.

Perfectly packaged
Confectionery

SWEET AND TENDER

THE PRODUCT

Chocolate or fruit bars

THE PACKAGING

Cold seal film or hermetically sealed

THE MACHINE SOLUTION

Our FUJI α wrapper in combination with the FFS1000 infeed, reliably packs over 600 bars per minute. Alternatively, with our attachless infeed, even sticky or soft products can be gently wrapped and will be hermetically sealed even up to over 200 cycles. Before packaging, the products will often have to be distributed, turned and grouped. We have a variety of individual concepts and deliver a complete solution.

Baked goods

FRESH FROM THE OVEN AND LONG SHELF LIFE

THE PRODUCT

Bread and other bakery products

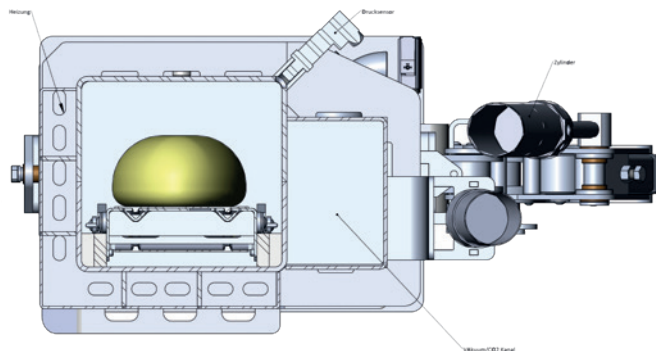

THE PACKAGING

Protective gas packaging with low residual oxygen content

THE MACHINE SOLUTION

We offer several solutions at once: fully integrated labelling systems for oxygen absorbers or the Pre-Vac system, in which the products are evacuated and then flushed with protective gas. Either way: fresh from the oven and packed for a long shelf life on the FUJI α wrapper.

Transportanlagen

Ryll

SIE KENNEN DAS ZIEL, Wir finden den Weg

Fachberatung und Planung • Montage und Inbetriebnahme • Produktion • Steuerungsbau • Schulung • Wartung

Transportanlagen Ryll plant, produziert und montiert Förderbandanlagen für Stück- und Schüttgüter.

Dabei konstruieren wir Branchenlösungen für die Industrie Hygiene & Lebensmittel, Produktion & Verpackung, Lagerung & Versand bei uns vor Ort (siehe Bilder auf unserer Webseite). Sprechen Sie uns an, wenn Sie spezielle Ware produzieren und gesonderte Förderanlagen benötigen. Komplettlösungen oder Teillösungen: Wir berücksichtigen Ihre Bedürfnisse! Wir unterstützen Sie bei der Konstruktion und Planung der Anlagen.

Anschließend fertigen wir die einzelnen Teile in unserer Produktion und setzen hier auf ganzheitliche Lösungen: Wir bauen die meisten Bauteile unserer Anlagen selbst. Sogar die Anlagensteuerung, so dass wir genau wissen, was wir im Anschluss bei Ihnen montieren. All unsere Mitarbeiter können eine langjährige Erfahrung (und Weiterbildungen) vorweisen, so dass wir auf Sicherheit und Qualität setzen, denn: Sie kennen das Ziel, wir kennen den Weg!

and short-term creation of sample packs.“**

LIVE TESTS AND DEVELOPMENTS

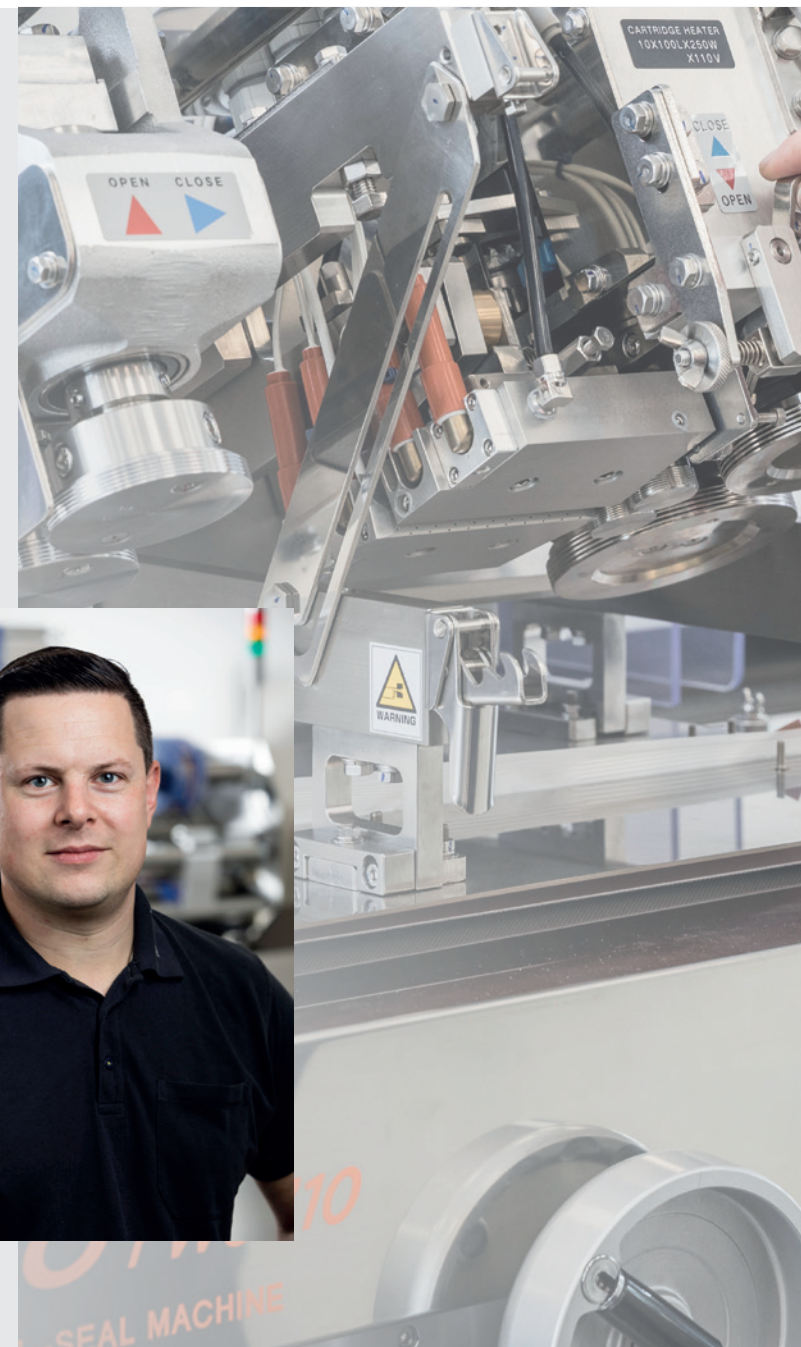

In our technical department in Denmark, we have various FUJI form fill and seal machines ready for demonstration. This allows us to demonstrate the machines with products, showcasing different machine options or assisting you with new product development and testing of packaging materials.

We also work closely with film manufacturers, to examine together if new developments are machine-compatible and thus accompanying the latest developments on the topics of sustainability, recyclability and consumer-friendly packaging.

Extensive testing equipment enables, for example, the testing of pack tightness and seal seam strength.

PROJECT PLANNING AND CONSTRUCTION AS REQUIRED

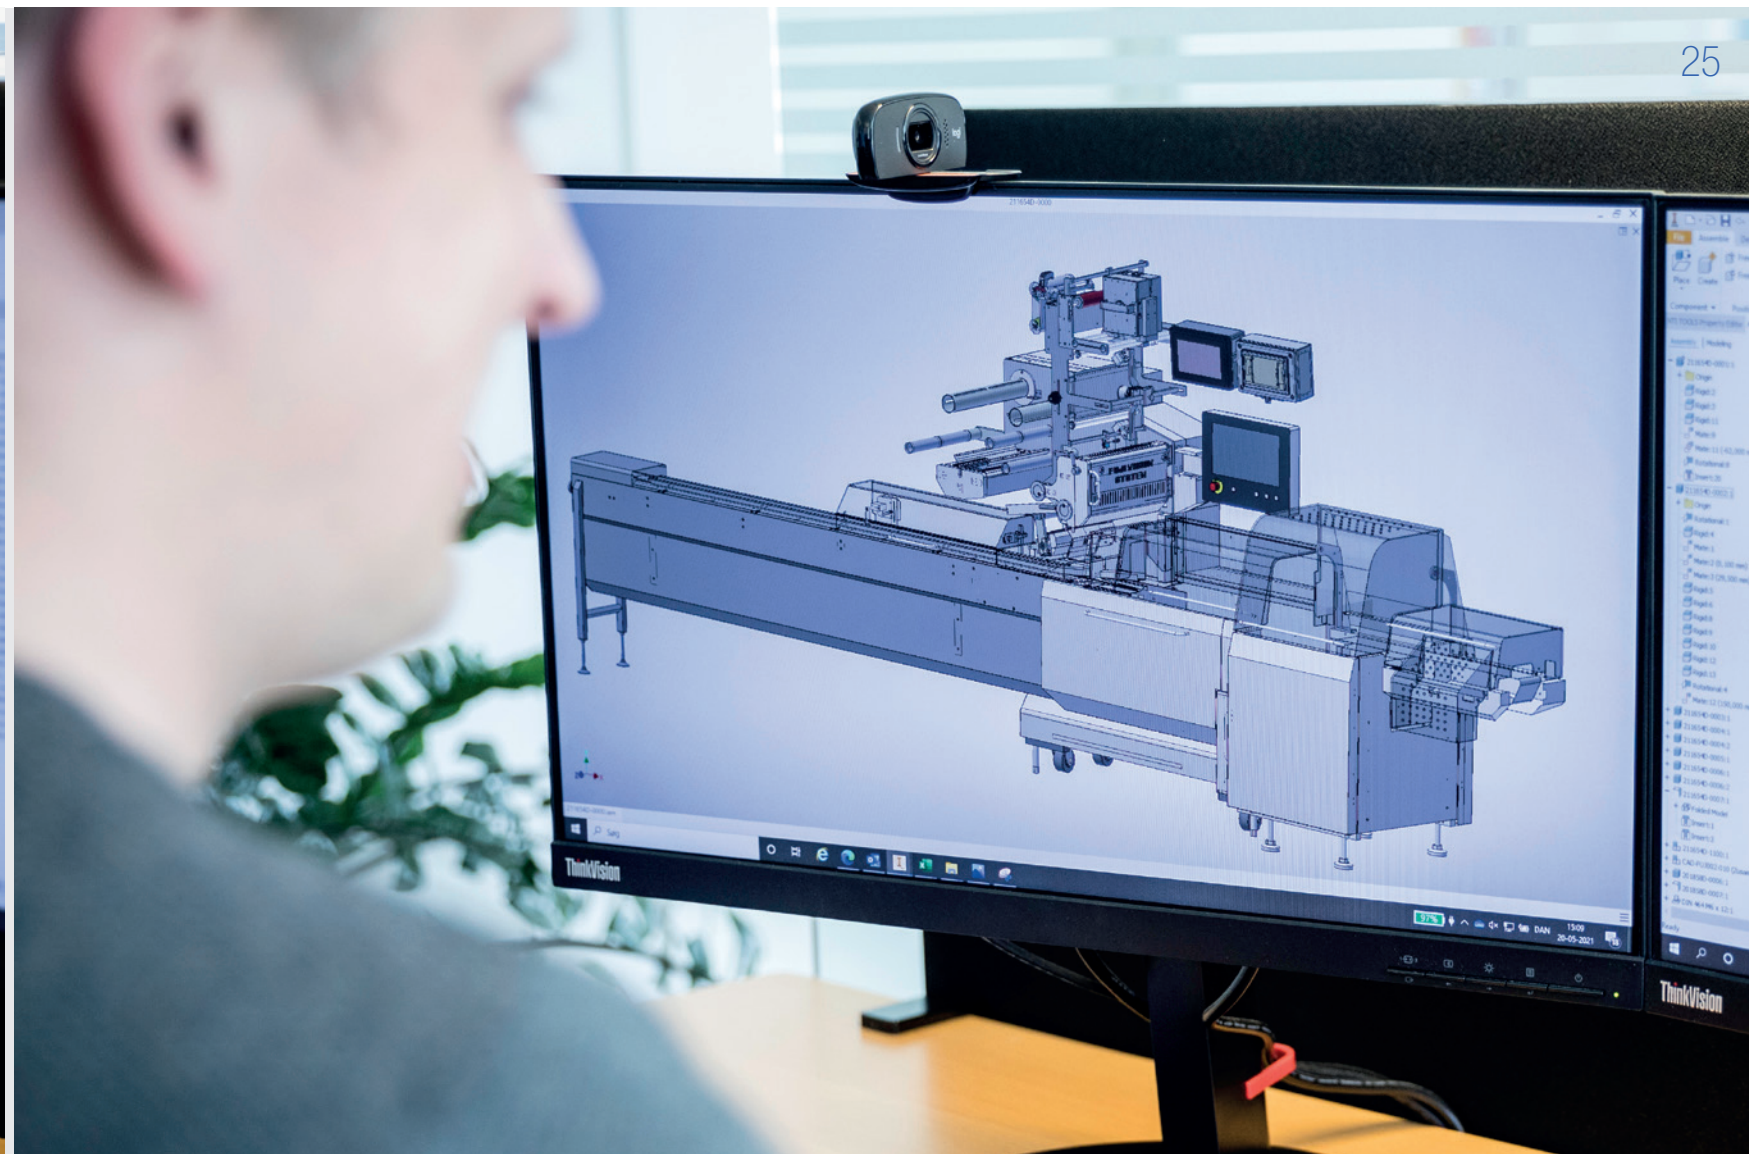

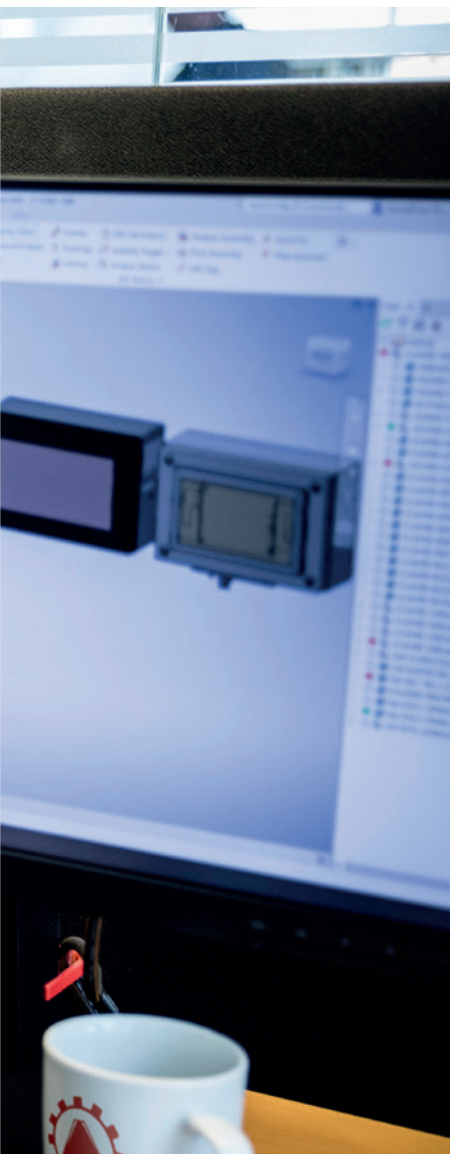

Customizing is our keyword: a process that we can best meet thanks to the given modularity. Our customers often have special requirements.

We project and develop the necessary components ourselves or together with our suppliers to seamlessly integrate the FUJI α wrapper into your production. Before delivery, we perform a final acceptance test (FAT) together with you and combine this with operator or specialist training on your new FUJI if desired. We then accompany the installation on site and offer after-sales support at various levels.

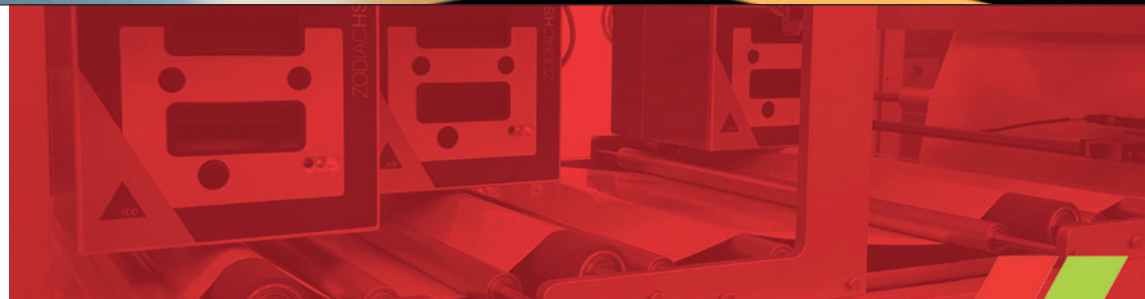

Claus Petersen
Technical Director

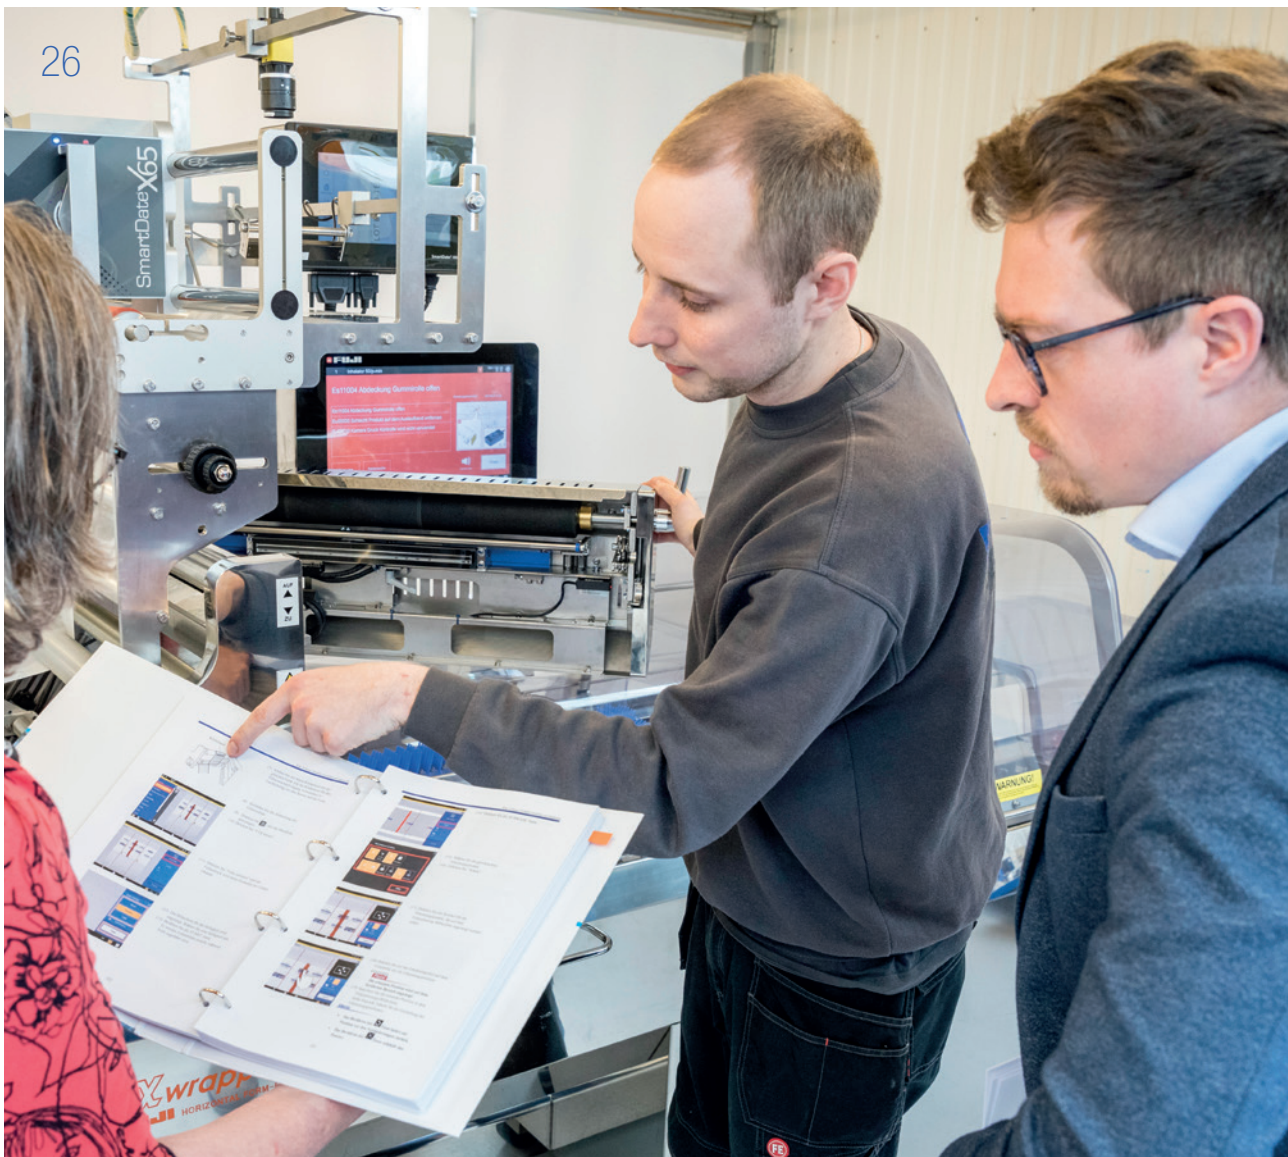

Elmoprint is a Danish manufacturer of high end labelling and print equipment. Equipment made to be used 24/7/365. Labelling equipment with servo motors for fast and precise label placement on your product. All labelling solutions are IP 66 and made for harsh environments.
